GE228型双层伺服控制花经轴高速整经机集计算机、人机界面伺服控制为一体的高性能整经机，适用于拉舍尔型多梳栉经编机花经轴的整经工艺。该机设计先进，性能稳定，可靠。适用于棉、涤长丝、低弹丝、粘胶丝、棉纱、腈纶纱等短纤纱的整经。

GE228 Double pattern beams servo-controlled warping machine is equipped with computer and man-machine interface servo controlling units and used for warping technology for pattern beam of Raschel multi-shuttle warping machine. It is suitable for warping polyamide and polyester filament, low elastic polyester fiber, viscose and short-fiber yarn such as cotton yarn.

主要技术参数

- 1、整经线速度：0~300米/分钟
- 2、经纱横向移动范围：15~150（毫米）
- 3、适用经轴长度：75"-132"（英寸）
- 4、整经头数：120锭（可根据用户需要定做）

Main Technolongy Parameter

- 1.Warping speed: 0~300(n/min).
- 2.Horizontal moving range of warping yarn: 15~150(mm).
- 3.Warper beam length: 75"—132" inch.
- 4.Warper creel capacity: 120 cones (or at customer's options) .

主要特点

- 1、采用先进的伺服驱动控制系统，驱动大导致滚珠丝杆进行精确排线。
- 2、全新的友好人机界面，触摸屏具有工艺数据管理等功能，操作方便。
- 3、具有单、双层分别记录和同步控制功能。
- 4、具有断电保护，加速制动功能。
- 5、经纱横移范围随轴经增加自动减少，形成锥形体，纱线成形美观。

Main Features

1. The machine adopts advanced servo driving controlling system to drive big ball bearing pole to arrange the yarn accurately.
2. New man-machine interface can manage the techniques data operate easily.
3. The machine can record the information of single and double layers and control synchronically.
4. The machine has protection function when power-failure and it can break quickly.
5. Horizontal moving range of the warping yarn becomes less automatically when the diameter of beam becomes more. It forms a taper and looks beautiful.
